FAYETTEVILLE, AR 72703

***COMPANY OVERVIEW***

Founded in 1999, Aqua Tech Systems, Inc has been providing wastewater treatment systems and related equipment for 22 years across the US. Aqua Tech Systems is a professional organization that specializes in the decentralized approach to wastewater systems and management. Serving a wide range of private and public clients, we utilize a collaborative approach with equipment manufacturers, engineers, private consultants, utility providers, and contractors to develop tailored solutions for infrastructure improvements and new developments. The key to our competitive position with respect to present and prospective competitors is that we are a full solutions provider to our customers. Aqua Tech Systems does not simply sell equipment, which is the practice of most suppliers to the wastewater market. We have assembled a team of highly skilled and reputable professionals creating a collaborative approach to develop tailored turnkey wastewater solutions. Our team's in-depth understanding of the regulatory, political, legal, financial and decision-making

processes which foster the industry have given us a significant competitive advantage. This multi-faceted approach is our business model and consistent efforts are placed upon it.

### ***EXPERIENCE***

Municipal Wastewater Treatment Plants, Private Developments, Schools, Commercial Developments and RV Parks in both new development and upgrading of failing or antiquated systems.

### ***CAPACITY AND CAPABILITY***

As a potential equipment provider being considered for the proposed project we have the ability to design systems from 265 GPD up to 2 MGD. Each of our treatment plants are custom designed for the required needs of the project. We have worked with and have been approved with a number of state environment permitting agencies. Each project we work on is designed to meet the standards and requirements of the particular state permitting the facility. Our systems can be designed to meet stringent effluent requirements to include the reduction of TSS BOD Fecal Coliform Phosphorus and Nitrogen.
